

Project 5 Commit Explanation

Since we accidentally did Project 5 using the pair programming technique we were using before, the commits do not accurately reflect the contributions from both team members. As advised, we tried to redo the commits and move things around to reflect the work done by each member. However, throughout this process, we ran into many issues, and some of our commits ended up getting duplicated in the repository. In order to prevent any issues from hurting the repository or the project itself, we have decided to detail the commits made in the repository, and accurately show what each team member contributed. The first commit for Project 5 starts on June 6, 2018.

Date	Committed By	Commit
June 6, 2018	AllanCodes / FarshadFeyzi	load balance (Farshad), master/slave (Allan), connection pooling (Farshad), stickysessions (Allan)
June 7, 2018	AllanCodes	load balancing/connection pooling working
June 8, 2018	AllanCodes / FarshadFeyzi	done - jmeter logs (Farshad), parser/report/additional changes (Allan)
	AllanCodes	parser readme
	AllanCodes	final
	FarshadFeyzi	final
	AllanCodes	new war
June 9, 2018	FarshadFeyzi	final
	FarshadFeyzi	Updated finalized report
June 10, 2018	AllanCodes	fixing merge conflict
	FarshadFeyzi	Fixed report
